

English wb 20.4.20

Monday

Who do you think this person is? What clues are there? When do you think she was alive?

Write some questions about what you would like to find out e.g. 'Where does she live?'
Remember your capital letter, question word and question mark.

Tuesday

Research Beatrix Potter. Find out as much information about her as you can.

Here are some links of good websites to try.

<https://www.peterrabbit.com/about-beatrix-potter/>

<https://primaryfacts.com/2526/20-beatrix-potter-facts/>

<https://learnenglishkids.britishcouncil.org/short-stories/beatrix-potter>

Make some notes about what you find out. These notes will help you to write your own biography about Beatrix Potter tomorrow. Here are some ideas for headings that you could write your notes under:

- Early life/childhood.
- The Lake District.
- Beatrix's art.
- Beatrix's books.
- Later life.

Wednesday

Make a timeline of Beatrix Potter's life. When you did your research yesterday you may have noticed a really good timeline on the peterrabbit.com website. You could choose a few of these events and make your own timeline. You could be really creative and present your timeline however you would like to. We will look forward to seeing your ideas.

Thursday

You could use the notes that you made from your research to write your own biography about Beatrix's life. You might be able to remember writing a biography about John McAdam earlier in the year. We had to remember to write it in time order. You could use the subheadings that you made your notes under yesterday. Remember to use your neatest joined handwriting.

Friday

Perhaps you could be revising rabbits and edit and improve your work? Think about the following things.

- Are there any spellings you can spot that don't look quite right?

- Does your writing make sense?
- Can you add some adverbs and adjectives to make it more interesting?
- Maybe you could add some pictures and captions?

Science wb 20.4.20

This half term we will be learning about plants and growing. There are two different things you could choose from this week.

1. If you have some seeds somewhere around your house or garden shed you could think of your own science investigation.
 - Start with your own question e.g. 'will seeds grow without light?' 'Would seeds grow if I water them with lemonade instead of water?'
 - You could set up one set of seeds with all the things you know they need to grow (plenty of light, warmth, water and soil) and one set of seeds where you change one of these things e.g. lemonade instead of water, dark instead of light.
 - You could then compare the two. Make a prediction about what you think will happen. Think about how you will record your results. Could you keep a little diary, take measurements or take photos.
2. Watch the video clips on bbc bitesize.
<https://www.bbc.co.uk/bitesize/topics/zpxnyrd/articles/zxxsyrd>
 You could make a poster about what plants need to grow. You may even be able to include some of your scientific knowledge about why plants need those things.
 Enjoy making your poster.

We can't wait to see what you have found out!
