

Science Home Learning wb 27.4.20

This week in science we will learn about the difference between bulbs and seeds. If you do have any bulbs or seeds in your garden shed, then it would be great to get them out and have a really good look at them. What is the same? What is different?

If you don't have any real bulbs and seeds then you could have a look at them on Google images. When you have done that, read the Twinkl PowerPoint to learn all about the differences between bulbs and seeds. You might need a grown up to help you with this.

Finally, have a go at drawing a diagram of a bulb and a diagram of a seed, labelling all the key parts. If you would like a challenge, then you could write short captions to explain what the parts are for.
